

**Veneer Profiles, Inc.** is a full service profile wrapping company specializing in the design and fabrication of custom window and door components. Since 1993 we have been meeting the exacting demands of you and your customers. Our proprietary veneer wrapping process ensures conformity to precise tolerances, absolute control over adhesive integrity, and unparalleled flexibility.

At Veneer Profiles we apply real wood veneer, copper foil, and exterior vinyl over a large variety of substrate types. These include cellular PVC, fiberglass, aluminum, fingerjoint, and Medium Density Fiberboard. Working directly with window and door companies we design and manufacture engineered components which meet the need of an ever changing industry.

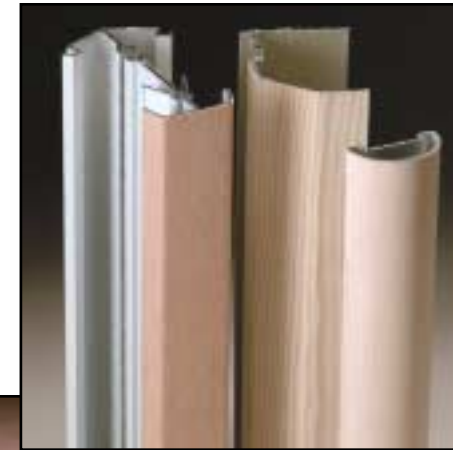

#### **We Offer:**

- Substrates of fingerjoint, MDF, LVL, even PVC or aluminum
- A variety of shapes
- Sizes ranging up to 10" wide and 16' long
- Veneers of pine (Ponderosa & Radiata), Fir, Hemlock, Red Oak, White Oak, White Ash, Maple, Cherry, Walnut, Natural Birch, White Birch and more!
- Vynils for interior and exterior applications

## Process:

We wrap real wood veneers around almost any shape. As the profiled substrate moves in a lineal fashion through our machines, a thin wood veneer is automatically coated with either interior or exterior adhesive and applied using a system of forming rolls.

## Product Applications:

Veneer wrapped products are used where dimensional stability, size requirements, and costs of solid wood alternatives are an issue and in circumstances where solid wood will not do the job, i.e. the veneer wrapped hardware cover used in window applications.

## Features and Benefits:

**All our finished product is 100% usable**, we allow no "defect cut-outs", defects which are allowed in the solid wood alternatives.

**Our products are available in specified lengths.** Unlike the solid alternative where the customer takes lengths from 3'-16', we offer the option of all 14' or 16' material at cost effective prices.

**Only the "best of the best" wood fiber is sliced into veneer.** This means our veneer wrapped products are consistently better performing and of higher quality than the alternatives.

**Dimensionally stable** - Ours is an "engineered" product with the veneer applied over another substrate material which will maintain tighter tolerances and improved dimensional stability.

**Adhesive technology** - We are one of only a few companies in the U.S. today who can properly apply a waterproof adhesive which exceeds current standards.

**With our vertical integration we control the product quality from beginning to end**, relying on ourselves for veneer supply, profile tolerances, and finished specifications.

We offer mixed loads of solid, fingerjoint, or fingerjoint primed mouldings and fine sliced veneers from our sister companies Medford Moulding and Western Veneer and Slicing. Full T/L, Partials, and LTL's.

## Custom Profile Wrapping

Veneer Profiles specializes in working with our customers on concepts leading to the design, manufacture, and production of unique products. Products unique because of substrate types, films, shapes, and applications:

We welcome custom wrapping opportunities where our customer provides one or more of the components in the finished product. We can provide all required components for your product or simply the expertise in assembly of your own parts. Custom finishing is available to your specifications.

## Substrates

- Fiberglass
- Aluminum
- MDF - interior
- MDF - exterior
- MDF - fire resistant
- Fingerjoint wood
- PVC plastics
- Particleboard
- Laminated Veneer Lumber
- Steel

## Veneers

- All hardwood species
- All softwood species
- Exterior vinyls
- Stainable vinyls
- Decorative papers

## Shapes

- Limited only by your imagination

## Applications

- Millwork
- Windows
- Doors
- Cabinets
- Store fixtures
- Picture frames
- Architectural
- Flooring
